

MADHUMATHI JAYAKUMAR

Data & Content Management | Business Requirements & Stakeholder Advisory

+91 9741409094 | madhumathija@gmail.com | LinkedIn | Portfolio

Summary

Content Specialist with over 1 year of experience providing subject matter expertise in data and content management, validating business requirements, and advising stakeholders on content strategy. Skilled in SQL, relational databases, content source review, documentation, and formal reports of recommendations. Delivers technical presentations and supports problem-solving on data and content issues across cross-functional teams. Supports AI/ML platform go-to-market across BFSI and healthcare, backed by an MBA in Finance and Analytics.

Experience

iTCart — Bengaluru, India

Jul 2025 – Present

Content and Requirements Analyst, AI Platforms

- Advised BFSI (financial services) and healthcare clients on content and data requirements across 5-8 concurrent engagements, translating regulatory and compliance-sensitive needs into solution and content specifications.
- Validated business requirements and content accuracy for 6+ projects, drafting requirement documentation, capability matrices, and use-case narratives, and ran review cycles across product, legal, and leadership, delivering formal reports of recommendations with 100% on-time delivery.
- Built and maintained a reusable content library (solution decks, one-pagers, objection-handling guides, case studies) across three verticals, conducting content source reviews for efficacy and applicability on a monthly cadence and keeping workflow documentation up to date and consistent; cut prep time by ~40% and adopted team-wide as the standard reference set.
- Designed and conducted onboarding and enablement training modules that standardized team workflows and ramped new members on content practices and quality standards.
- Represented content groups across four cross-functional teams (product, engineering, legal, leadership); facilitated problem-solving on data and content issues, scoped POCs across 4 accounts with defined success criteria, and reported project and pipeline data in Salesforce as status and quality summaries for leadership.
- Acted as a primary point of contact and delivered technical presentations across three AI verticals, clearly explaining data flow and content maintenance processes and adapting content to each stakeholder's regulatory environment and requirements.

Projects

- **Enterprise Entity Data Validation (SQL)** — Designed a six-table relational schema to validate company/entity records from multiple data sources, using joins, subqueries, CASE logic, and aggregate functions to flag duplicates, missing identifiers (LEI, DUNS, Tax ID, VAT), and stale records; produced seven data-quality reports (PASS/FAIL/WARNING validation, freshness, coverage by country and industry). github.com/madhuujay/enterprise-entity-validation
- **AI Content & Knowledge Management (SQL)** — Built a normalized six-table database to catalogue reusable content assets by type, vertical, and owner, log usage across projects, and track review history; wrote queries joining usage and review logs to report on content usage, freshness, and reusability. github.com/madhuujay/ai-content-management-sql

Skills and Tools

Content & Data Management: Content lifecycle maintenance, content source review for efficacy and applicability, data quality checks, documentation, process standardization, ad hoc research

SQL & Databases: Relational schema design, relational databases, joins, subqueries, CASE logic, aggregate functions, data extraction and reporting, stored procedures

Business & Requirements: Business requirement gathering and validation, requirements writing, solution mapping, formal recommendation reporting

Stakeholder & Communication: Internal and external stakeholder advisory, cross-functional collaboration, technical presentations, client communication, escalation handling

Collaboration & Delivery: Problem-solving on data and product issues, prioritization, independent execution, cost efficiency, resource efficiency

Training & Domain: Training modules, onboarding, best practices sharing, financial data, AI/ML, software release cycle

Tools: SQL, Excel, Salesforce, Notion, Confluence, Jira, Slack, Google Workspace

Education

MBA (Finance and Analytics) | Amrita School of Business, Coimbatore

2023 – 2025

B.Com (Professionals) | Jain University, Bengaluru

2020 – 2023
